

#### IMPROVING THE LIVES OF PEOPLE WITH NEURODEVELOPMENTAL DISABILITIES

#### **Forward looking statements**

This presentation contains forward looking statements that involve risks and uncertainties. Although we believe that the expectations reflected in the forward looking statements are reasonable at this time, Neuren can give no assurance that these expectations will prove to be correct. Actual results could differ materially from those anticipated. Reasons may include risks associated with drug development and manufacture, risks inherent in the regulatory processes, delays in clinical trials, risks associated with patent protection, future capital needs or other general risks or factors.

# Global leader in neurodevelopmental disorder therapy development

Developing new therapies for debilitating neurodevelopmental disorders that emerge in early childhood and characterised by impaired connections and signalling between brain cells

2 novel drugs, treating 6 neurodevelopmental disorders, all with Orphan Drug designation, with no existing approved therapies<sup>1</sup>

Neuren Owns all intellectual property, with no royalties payable to 3<sup>rd</sup> parties

Incorporated in New Zealand, based in Melbourne, Australia, listed on ASX (Code: NEU)

<sup>&</sup>lt;sup>1</sup> Except growth hormone to treat some aspects of Prader-Willi

### **Highlights**

1

NDA submitted for trofinetide in Rett syndrome, with potential for Q1 2023 approval. Robustly positive top-line results in pivotal Phase 3 trial 2

Potential revenue from Acadia over 2022 and 2023 for Rett syndrome in the US alone of US\$83m (A\$118 million)<sup>1</sup> plus double-digit % royalties

3

Strong partnering interest received for trofinetide outside North America

4

Accelerating Phase 2 development of NNZ-2591 in 4 indications, with potential markets 5x Rett syndrome 5

NNZ-2591 novel mechanism of action has many more potential applications

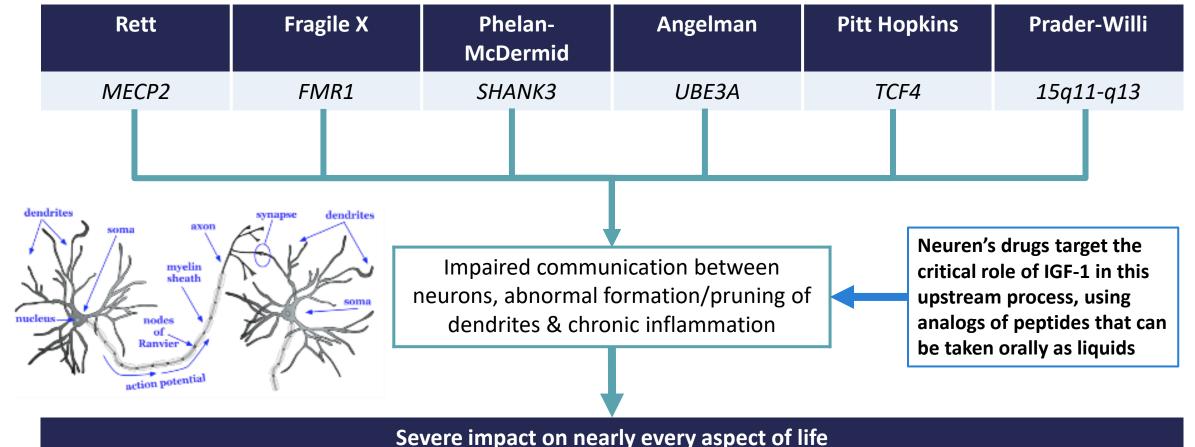

6

A\$31 million cash at 30 June 2022 – well funded to execute NNZ-2591 Phase 2 trials and preparation for Phase 3

<sup>&</sup>lt;sup>1</sup> Assuming a New Drug Application (NDA) is approved by the FDA, the product is launched in the US, US\$33m is received as one third share of the value of a Rare Pediatric Disease Priority Review Voucher if awarded upon approval of a NDA, and a USD/AUD exchange rate of 0.70

#### Seeking a ground-breaking impact on neurodevelopmental disorders

walking and balance issues speech impairment impaired hand use

anxiety and hyperactivity intellectual disability sleep disturbance

seizures breathing irregularities gastrointestinal problems

# All development programs at Phase 2 or later

Compound	Indication	Preclinical	Phase 1	Phase 2	Phase 3	Registration	Commercial rights
Trofinetide	Rett <sup>2</sup>					US NDA filed, potential PDUFA date Q1 2023 <sup>1</sup>	NA: O ACADIA
	Fragile X <sup>2</sup>						RoW: neuren
NNZ-2591	Phelan- McDermid <sup>3</sup>						
	Angelman <sup>3</sup>			Results H1 2023			
	Pitt Hopkins <sup>3</sup>						neuren
	Prader-Willi <sup>4</sup>			Results H2 2023			

<sup>&</sup>lt;sup>1</sup> Assumes priority review

<sup>&</sup>lt;sup>2</sup> Orphan Drug designation in US and EU, Fast Track designation in US

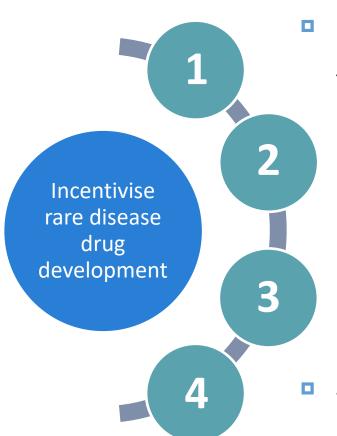

<sup>&</sup>lt;sup>3</sup> Orphan Drug designation in US and EU

<sup>&</sup>lt;sup>4</sup> Orphan Drug designation in US

### **Attractiveness of Orphan Drug model**

#### Neuren is targeting multiple "rare diseases", but they are not "ultra-rare"

Marketing exclusivity periods protect against generics independent of patents (7.5 years in US, 12 years in EU, 10 years in Japan, South Korea and Taiwan, China has proposed to introduce 7 years)

Priority review by regulators (e.g. 6 months in US instead of 10 months) and higher probability of approval

 Urgent unmet need results in strong engagement from patient community and leading physicians, and immediate access to known patients

Attractive pricing environment (average US Orphan Drug price of US\$186,758 per patient p.a. in 2017¹)

### **Transformation has begun**

#### **Last 12 Month Share Price Performance**

## Three key drivers transforming near term value

Realise Neuren's share of trofinetide value in the US through Acadia's New Drug Application for Rett syndrome Implement commercial strategy for trofinetide ex-North America, using US data for registration

Confirm efficacy of NNZ-2591 in Phase 2 trials for 4 valuable indications

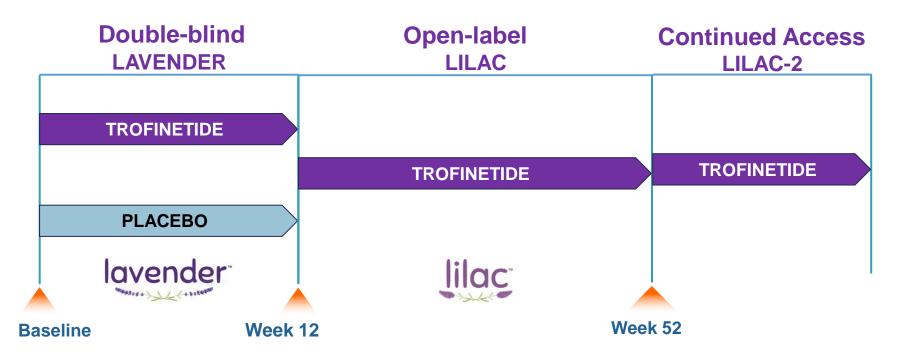

#### **Rett syndrome Phase 3 and NDA**

- Acadia submitted NDA in July 2022 for treatment of Rett syndrome in patients two years of age and older
- Orphan Drug qualifies for 6 months Priority Review, which would mean potential for approval in Q1 2023
- NDA based on pivotal efficacy from positive Phase 3 trial, supportive efficacy from Neuren's positive Phase 2 trial, safety data from completed and ongoing studies

LAVENDER™ randomised, double-blind, placebo-controlled trial:

- 187 females aged 5 to20 years
- RSBQ (caregiver) and CGI-I (physician) at 12 weeks co-primary efficacy endpoints

# **Robustly positive Lavender**<sup>TM</sup> top-line efficacy results

		Placebo	Trofinetide
	Rett Syndrome Behaviour Questionnaire (RSBQ) (change from baseline to week 12)	-1.7	-5.1
	p-value		P=0.0175
Co-Primary	Effect Size: Cohen's d		0.37
Endpoints	Clinical Global Impression of Improvement (CGI-I) (score at week 12)	3.8	3.5
	p-value		P=0.0030
	Effect Size: Cohen's d		0.47
Key	CSBS-DP-IT Social Composite Score (change from baseline to week 12)	-1.1	-0.1
Secondary Endpoint	p-value		P=0.0064
Liidpoiiit	Effect Size: Cohen's d		0.43

### Rett commercial opportunity largely de-risked

Estimates	US	Europe	Japan	China urban	Other Asia
Potential patients <sup>1</sup>	10,000	13,000	3,000	28,000	6,000
Patients currently identified	5,000	4,000	1,000	2,000	'00s

#### **North America**

Neuren potential revenue from Acadia:

US\$10m	in 2022 following acceptance of NDA for review
US\$40m	in 2023 following first commercial sale in the US
US\$33m	in 2023 one third share of Priority Review Voucher estimated value <sup>2</sup>
Up to US\$350m	on achievement of thresholds of annual net sales
double digit %	tiered, escalating royalties on net sales

- Peak annual sales potential in US at least US\$500m³
- Orphan exclusivity plus patents to 2040

#### **Ex-North America**

- Partnering interest from multiple companies for individual countries and broader regions
- Neuren has full access to US data for registration ex-North America
- Strong interest from families, advocacy groups and physicians
- Lower diagnosis rates expected to increase with awareness and accelerate with availability of a treatment

<sup>&</sup>lt;sup>1</sup> Potential patient estimates derived by applying the mid-point of the published prevalence estimate range to the populations under 60 years

<sup>&</sup>lt;sup>2</sup> Assuming Rare Pediatric Disease Priority Review Voucher is awarded upon approval of a NDA and has a market value of US\$100m

<sup>&</sup>lt;sup>3</sup> Acadia 2Q18 Earnings Call presentation and Jefferies Healthcare Conference 2 June 2021

### 5x larger opportunity for NNZ-2591

Disorder	Gene	Published prevalence estimates	Potential patients		
mutation			US <sup>1</sup>	Europe <sup>1</sup>	Asia <sup>1, 2</sup>
Phelan- McDermid	SHANK3	1/8,000 to 1/15,000 males and females	22,000	28,000	81,000
Angelman	UBE3A	1/12,000 to 1/24,000 males and females	14,000	18,000	52,000
Pitt Hopkins	TCF4	1/34,000 to 1/41,000 males and females	7,000	9,000	25,000
Prader-Willi	15q11-q13	1/10,000 to 1/30,000 males and females	13,000	16,000	47,000
			56,000	71,000	205,000

- Current opportunity for NNZ-2591 is more than 5 times the Rett Syndrome opportunity<sup>3</sup>
- There are many other neurodevelopmental disorders potentially relevant for NNZ-2591 mechanism of action
- Neuren retains global rights

<sup>&</sup>lt;sup>1</sup> Estimates derived by applying the mid-point of the prevalence estimate range to the populations under 60 years

<sup>&</sup>lt;sup>2</sup> Asia comprises Japan, Korea, Taiwan, Israel and urban populations of China and Russia

<sup>&</sup>lt;sup>3</sup> Based on number of potential patients globally

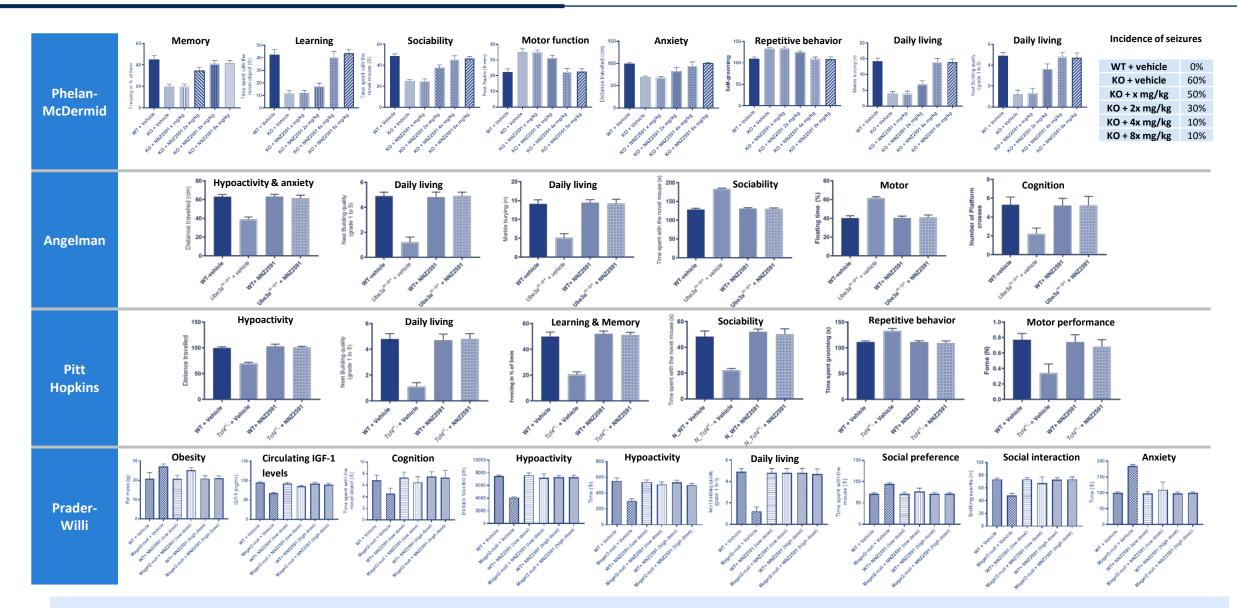

# NNZ-2591 has ideal attributes leading into Phase 2

- ✓ Novel mechanism of action
- ✓ Clear and consistent efficacy in mouse models of each syndrome
- ✓ Biochemical effects in the brain confirmed
- ✓ Optimum dose identified
- ✓ Demonstrated high oral bioavailability and blood-brain barrier penetration
- ✓ IND-enabling program of non-clinical toxicology and CMC studies completed
- ✓ Proprietary drug substance manufacturing process with exceptional purity and high yield, administered as patient-friendly liquid dose
- ✓ Safe and well tolerated in Phase 1 trial
- ✓ Orphan designations from FDA and EMA

### Clear and consistent efficacy in animal models

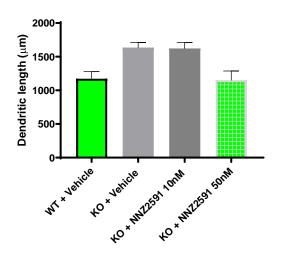

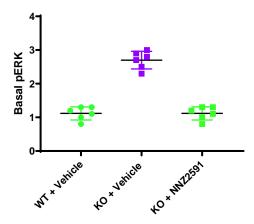

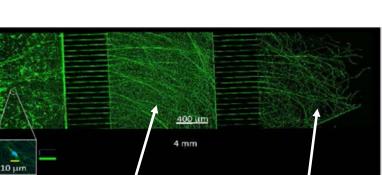

#### **Biochemical effects confirmed**

In biochemical testing, NNZ-2591 was shown to normalise the abnormal length of dendrite spines between brain cells, the excess activated ERK protein (pERK) and the depressed level of IGF-1 in *shank3* knockout mice

Abnormal dendrites in shank3 knockout mice

Normalisation after treatment with NNZ-2591

16000-

12000-

10000

mIGF-1 (pg/ml)

### **Key features of first Phase 2 trials**

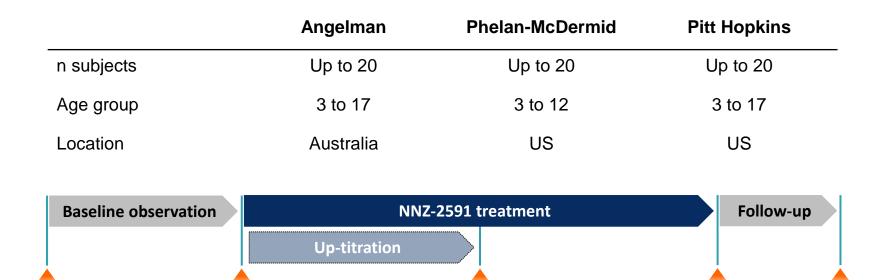

Week 0

# Overall aim – expedite data that enables subsequent trials to be designed as registration trials and prepare for Phase 3 in parallel

Week 4

- Prioritising speed to data
- Maximising opportunity to demonstrate effects
- Confirm safety and PK in pediatric patients
- Assess treatment impact across multiple efficacy measures to select primary endpoint for registration trial

Week 10

**Phase 3 preparation** 

Week 19

Week 17

### On track to deliver significant value upside over next 18 months

Prader-Willi syndrome Phase 2 trial results (H2 2023)

Phase 2 trial results in Angelman, Phelan-McDermid and Pitt Hopkins syndromes (H1 2023)

Approval of NDA for Rett syndrome (Q1 2023)

Commercial partnerships ex-North America for Rett syndrome

Commence Prader-Willi syndrome Phase 2 trial (H2 2022)

FDA acceptance of NDA filing for Rett syndrome (Q3 2022)

✓ Commence Phelan-McDermid and Pitt Hopkins syndromes
Phase 2 trials

✓ Acadia submits New Drug Application (NDA) for Rett syndrome

√ Commence Phase 2 trial in Angelman syndrome

# **Appendix**

#### Novel mechanisms of action - trofinetide

#### **Trofinetide**

Trofinetide is an investigational drug and a novel synthetic analog of GPE, the amino-terminal tripeptide of IGF-1

GPE=glycine-proline-glutamate; IGF-1= Insulin-like growth factor 1

#### Proposed Mechanism of Action<sup>1</sup>

#### **Rett syndrome features:**

- Insufficient formation of new synapses by neurons
- Excessive pruning of existing synapses by overactive microglia

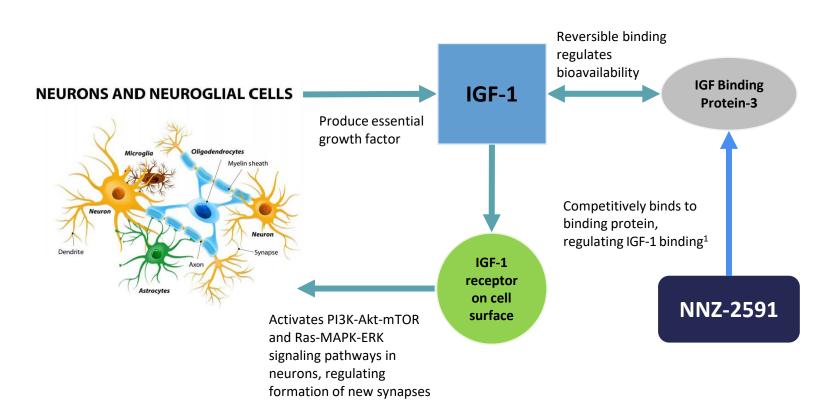

#### **Trofinetide is thought to:**

- Improve synaptic function and restore synaptic structure
- Inhibit overactivation of inflammatory microglia and astrocytes
- Increase the amount of IGF-1 in the brain

<sup>&</sup>lt;sup>1</sup> Chahrour, Science, 2008; Itoh, J Neuropath Exp Neurol, 2007; Bourguignon, Brain Res, 1999; Tropea, PNAS, 2009 Source: Acadia Lavender Study Results Presentation https://ir.acadia-pharm.com/static-files/84457c64-60ab-4b2f-a166-edc1d465f4a8

#### Novel mechanisms of action - NNZ-2591

- NNZ-2591 is a synthetic analog of cyclic glycine proline, a peptide that occurs naturally in the brain, designed to be more stable, orally bioavailable and readily cross the blood-brain barrier
- NNZ-2591 can regulate the amount of IGF-1 that is available to activate IGF-1 receptors
- The effects of NNZ-2591 are "state-dependent" –
  correcting impairment, but not impacting normal cells

<sup>&</sup>lt;sup>1</sup> doi: 10.1038/srep04388: Guan et al, 2017: Cyclic glycine-proline (cGP) regulates IGF-1 homeostasis by altering the binding of IGFBP-3 to IGF-1
